## World News

The US plans to cut 50 land based ICBMs, 56 submarine missile launchers, and convert 30 B-52 bombers from the nuclear weapons force [1]. Meanwhile, Russia is preventing US plans from verifying their compliance as required by the last nuclear weapons reduction treaty [2]. Concurrently, Russia is massing troops along the Eastern border of Ukraine [3].

One report indicates Iran and Pakistan plan to conduct joint naval exercises in the Strait of Hormuz, where over a third of the world's oil flows [4]. Additionally, one article indicates India may reverse its policy of no first use of nuclear weapons [5].

Meanwhile, Iranian officials appear to recognize the importance of nuclear weapons. Case in point, Iran's Nuclear Chief claims whoever has nuclear technology has inherent power [6]. What's more, Iran's defense minister asserted that ICBM development is not negotiable [7]. What is perhaps more troubling is the appearance of an Iranian victory in the nuclear weapons discussions. For instance, the US unfroze an additional \$450 million in Iranian assets [8].

While the US relies on Russia for transport to the space station, China is highlighting the need to militarize space. Case in point, Chinese President Xi Jinping want air and space defense capabilities to be combined [9]. At sea, China is also getting more competition over its claims for the South China Sea. For instance, Japan is constructing a military base on one of its westernmost islands, near the area claimed by China [10]. The new base is the first Japanese western expansion in 40 years and will garrison around 100 troops with a radar facility [11]. Meanwhile, other Asian nations are hoping the US will stand with them in addressing China's militaristic territorial tensions [12]. The sad truth remains, China is growing in power because of the wealth transfer associated with unfair trade practices.

## Security

Personal identity theft continues to be a dominant problem. What's more, without US regulatory leadership in adopting smart card technology, the news will continue to focus on this crime. For example, the credit checking agency

Experian, is being investigated for a security breach that puts 200 million people at risk [1]. One report suggests the number of data breaches during 2013 increased 62% from the year before [2].

After all the effort that

went into protecting the critical infrastructure, we discover just how vulnerable the power grid remains. For instance, researchers continue to discover easily exploitable vulnerabilities that exist in commercial

## Terrorism

Now that the Libyan government has changed, the result is not what was expected. For instance, Southern Libya has a large contingent of militant Islamists [1].

Meanwhile, violence within Syria continues. For instance, fighting in the city of Aleppo claimed at least 29 lives [2].

In Pakistan, terrorism continues to leave its mark. A bomb explosion killed at least 21 people at a market located on the outskirts of the Pakistani capital of Islamabad [3].

In Nigeria, at least 70 people were killed in a terrorist bomb blast at a crowded bus station [4]. In Egypt, a bomb blast wounded two policemen [5].

Recall, the September 11 terrorists used commercial aircraft as weapons. So whenever a commercial plane disappears, one has to ask where it went. It has been over one month since the disappearance of Malaysia Airlines flight 370. After failing to find any plane wreckage, a robotic submarine is searching the

waters in an area that may hold the final location [6]. Given it has been over 10 years since the September 11 terrorist attack; do we not know the location of every commercial aircraft flying (especially in Asia)?

A favorite target of Islamic terrorist groups remains Israel and its people. For example, a planned Hezbollah attack against Israeli tourists was foiled in Bangkok, Thailand [7].

## Economy

The information provided by the Labor department continues to show some improvement. For the first time since May 2007, the number of first time unemployment claims, was only 300,000 [1]. Then for the following week, the number reported was 304,000 [2].

By all indications, the economy is starting to rebound. For example, in March 503,000 more people joined the labor force [3]. This indicates greater confidence in the job mar-

ket. However, the same article indicated only 192,000 new jobs were created pointing to problems ahead. Other factors that could influence the economy are: the Russian expansion into Ukraine, China's expanded territory claims, Iran, North Korea, and terrorism.

## China Pollution

In a rare report, a study cited the effects of Asian pollution in altering the weather [1]. What's more, the pollution in China is worse than any person has seen, except for those caught in forest fires or volcanic eruptions [2].

One issue with determining the actual pollution in China, is getting valid information. Nevertheless, the Chinese government released a report indicting almost 20% of the land is polluted [3]. So if China is admitting one fifth of its soil is polluted, what is the actual percentage?

One technique China uses to downplay its pollution problem is to blame Western countries. Case in point, a French utility firm was blamed for tap water pollution in Lanzhou, China [4]. Such charges also help China maintain unfair trade by subjecting foreign investors to ever more regulation. In this example, the pollutant identified was benzene; typically used in chemical and other manufacturing processes. The question here is how can a utility company filter out unlimited quantities of pollution? Has China ever blamed a domestic water utili-

ty for pollution found in the tap water?
